

A Causal Research Investigation of COVID-19

Author: Camilla Bendetti
Collaborator: KG Nguyen

Step 1: Research Question

Question: What is the effect of wearing masks on the chances of contracting COVID-19?

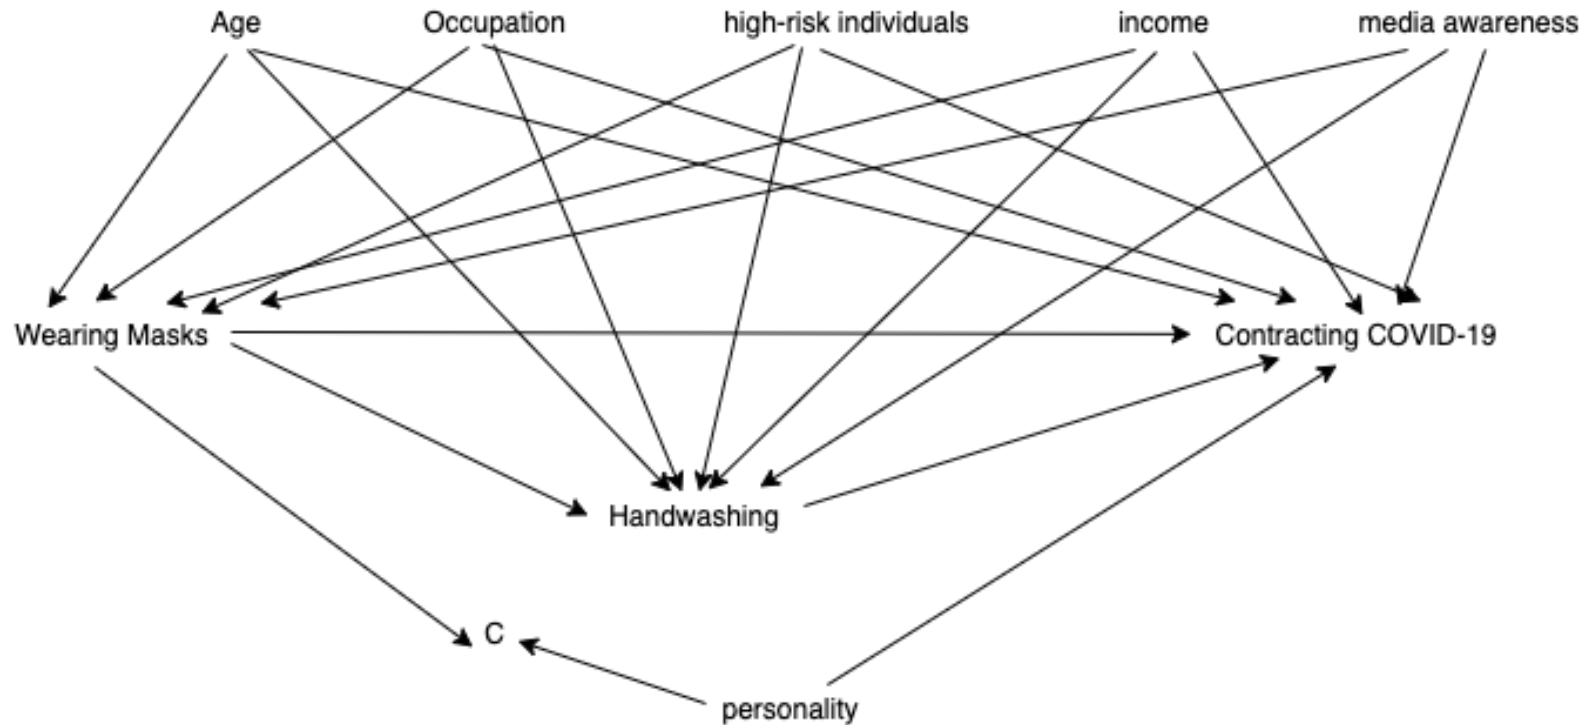

WEAR IT

Social Media's
Influence on
Precautions
against COVID-19

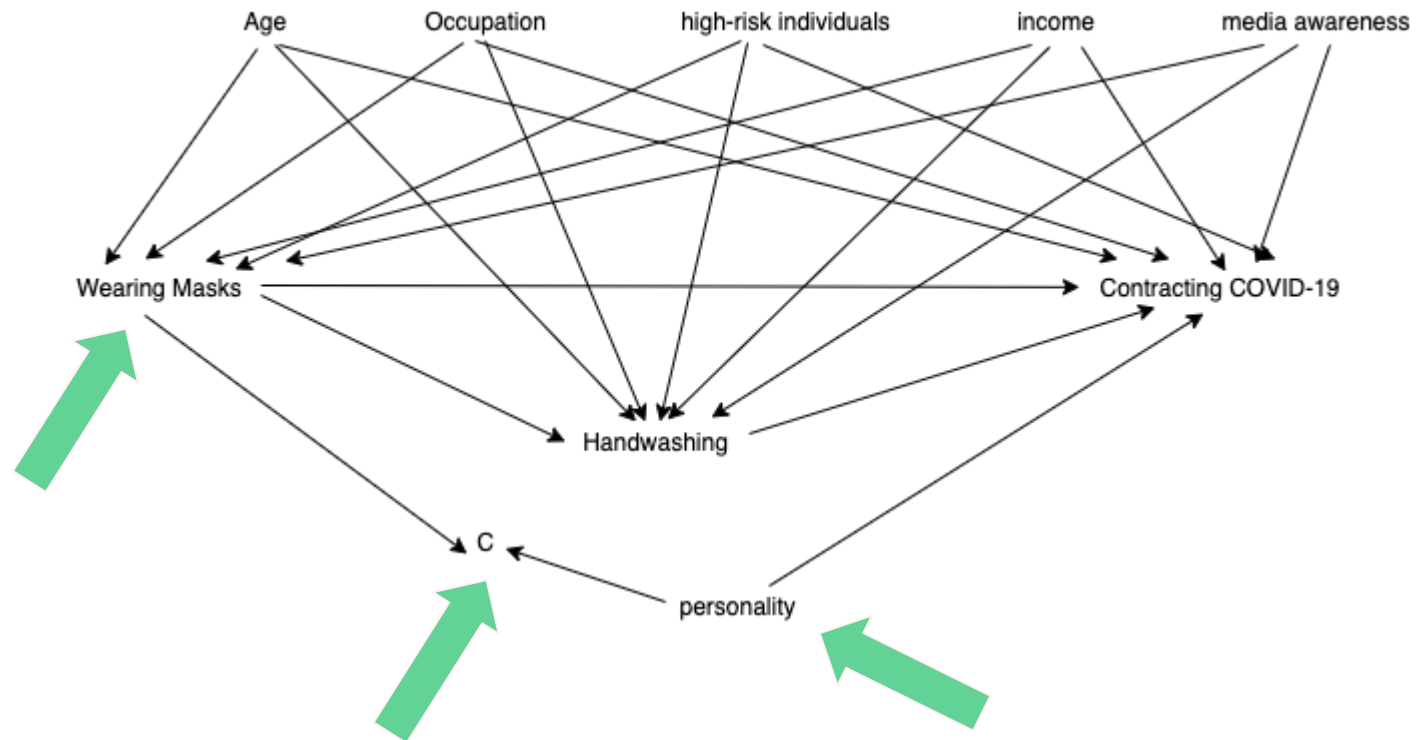

Step 2: Directed Acyclic Graph

Step 3: IP Weighting Analysis

Research goal: Estimate the effect of wearing masks on the chances of contracting COVID-19 in the whole population.

Step 4: Mediation Analysis

Research Question:

“How much of the effect of wearing masks on chances of contracting COVID-19 is mediated by handwashing?”.

Relevant Results:

ADE(control): NDE

ACME(treated): NIE

Prop. Mediated

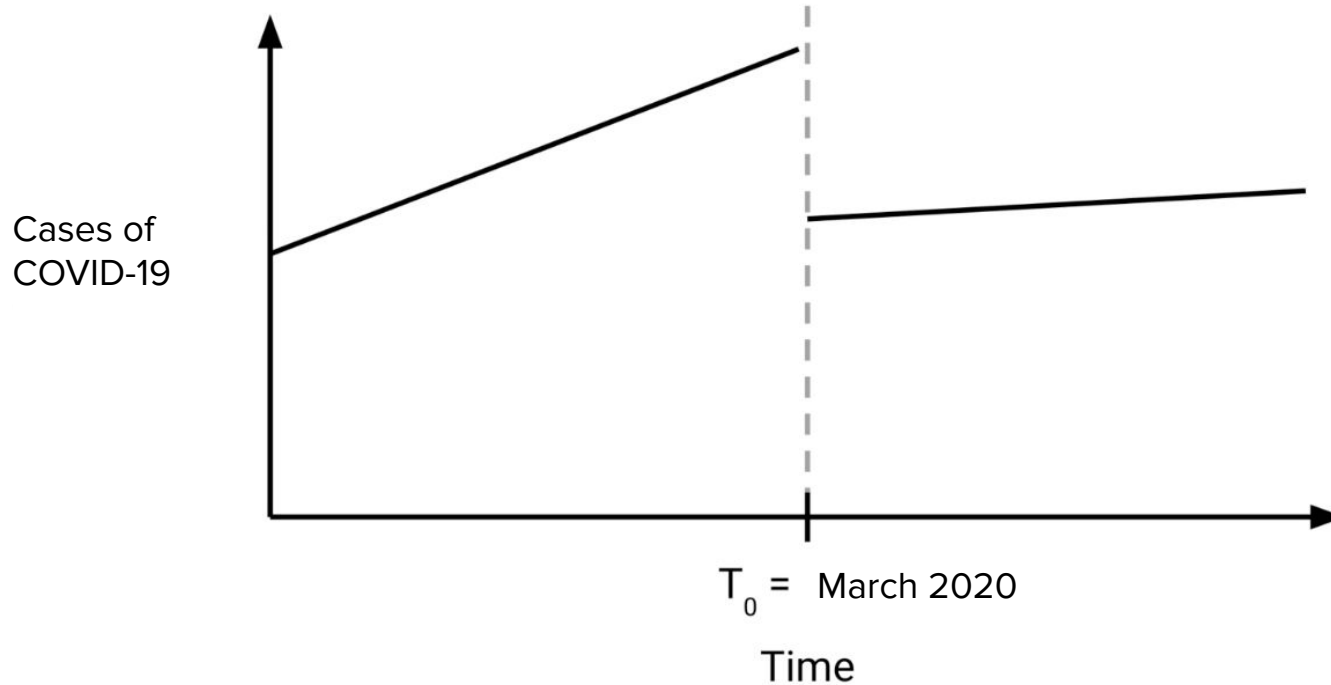

Step 5: Causal Discovery

Unmeasured Confounder: Media Awareness

Step 6: Interrupted Time Series

Step 7: Time-varying Treatment Setting

Is it appropriate/useful to conduct this investigation in a time-varying treatment setting?

Research Question: Do transmission rates of COVID-19 affect the propensity that people wear masks in the future?
